In addition, it is difficult to know whether you are doing it in the right way or if any method you use to reduce the size of the PDF may compromise its quality. Here we will show you how to compress PDF in the right way and what to watch out for when reducing the size of each PDF file. The best way to compress PDF on Mac First things first: When you shrink a PDF file on your Mac, it should never harm the document. It shouldn't take long. If you need to shrink PDFs and it takes more than a few seconds (for most files), that's a problem. Compression may compromise the file, which can have devastating effects. Your best bet is to find a reliable application to compress pdf file sizes without damaging the document. One of the best options is PDF Squeezer for Mac. It can reduce the pdf size by up to 90 percent. It also has the ability to limit the image quality of the PDF file, allowing you to purposefully reduce image quality to make the reduced file size even smaller when compressed. It's really convenient when you have something like a text document that doesn't need to be pixel-perfect. You can also select the final resolution of the PDF, convert its color profile, eliminate an notations, select a speed of discreet collection, and convert to a bitmap if you wish. PDF Squeezer just has a ton of fine-tuning that you can do to find this sweet spot for a reduced PDF that retains as much (or a little) quality as you want. Reducing the size of the PDF on Mac One is a convenient feature of PDF Squeezer is its check for reduced files. If you're trying to reduce a file below a certain threshold - say the final file size is 80 percent smaller, but it's only reduced to 40 percent of its original file size - the app allows you to cancel the compression and start over. This is when you can precisely adjust the image quality of the file to further reduce its final size. For those of you who really need a powerful, free PDF compressor, PDF Squeezer also reduces pdf files. It may take several files, shrink them individually and allow you to The same granular fine-tuning options! PDF Squeezer even allows you to squeeze entire folders and sub-folders full of PDF files. This is really the most powerful option we have found to reduce the file size of pdf. Your Mac has a built-in way to reduce the size of the PDF. The Preview app has a really clear way to compress PDFs. We'll show you how The most popular way. Use Adobe to squeeze PDFs. If you're wondering how to make a PDF smaller using the most popular method, Adobe Acrobat is the answer. This is a far and away leading name for PDFs, including reducing file size. There's a good reason we don't recommend it. Adobe Acrobat is very expensive. If all you want to do is reduce the size of PDFs, there is simply no reason to use Adobe Acrobat. It's also a really cumbersome process. Here's how to use Adobe Acrobat to reduce the size of a pdf: In Adobe Acrobat Pro, select File from the menu bar. Select the file you want to open. Select File on the menu bar of this document. Select Save as another. Select a reduced-size PDF. In the pop-up window, select Keep existing in the Make compatible with selector. Select a location to save the file. Click Save. Compress PDF files online There are many, many options for reducing a PDF file online. One of the best options is SmallPDF. It's a pretty straightforward process and it's free - but there are drawbacks. To download a file, you must upload it to smallPDF servers. Thus, you are able to compress a file: there is simply no way to compress a remote file. If you are not comfortable living on a server, do not use an online service. Everybody's going to do something like that. SmallPDF.com says your file is only for an hour, which seems like a way to keep it comfortable in case you download it later for any reason. You must also download the compressed PDF from its server, which means you are relying on a connection. While downloading isn't great, you may not be able to download it if your connection isn't good. Learn more about how to search PDF on Mac Tips for pdf compression There are a few things to keep in mind when compressing PDF files that can save you a lot of time: Delete something unnecessary. If your file doesn't need the images or graphics you've included, removing them can really help reduce the PDF. Images and other visual assets take up a lot of file space. Remove unnecessary pages. Consider why you are exporting the file. If you need someone to read the white paper, they may not need to look at the three pages of positive customer feedback at the end of the document. Consider which pages can be removed. Create multiple files. If you need someone on the team, to examine a certain part of your PDF, consider creating a separate PDF with only the assets it needs, which you can only send to it. For this it is done to reduce the lot! First, try exporting to other formats. Formats. open a file in Word, then save as PDF - and then using PDF file compression actually works best.
